

ALI MURTAZA

DevOps Engineer | Kubernetes & Cloud Infrastructure | SRE

Bengaluru, India • +91-9569804220 • connect.alimurtaza@gmail.com • linkedin.com/in/alidevopsculture • github.com/alidevopsculture

SUMMARY

DevOps Engineer with hands-on experience running observability and incident-response for production Kubernetes clusters (AWS EKS/on-prem hybrid), covering Prometheus, Grafana, Loki and Thanos, and stateful data services including PostgreSQL (CNP), Kafka (Strimzi), Redis and EMQX. Track record of hardening cluster reliability, resolving live production failures (OOMKills, crash loops, OIDC/auth issues), and delivering CI/CD pipelines that cut release cycles from months to days.

TECHNICAL SKILLS

Cloud / IaaS: AWS (EKS, EC2, IAM, S3, VPC, NLB/ELB) · Terraform

Kubernetes: EKS & Minikube · Helm · HPA · Ingress-NGINX · IRSA · Manifests · kubectl debugging

Observability: Prometheus (kube-prometheus-stack) · Grafana · Loki · Thanos · Alloy · Site24x7

Data Services: CNPG PostgreSQL · Kafka/Strimzi (KRaft) · Redis · EMQX (MQTT)

CI/CD: GitHub Actions · Jenkins · Docker multi-stage builds

Identity & Security: Keycloak/OIDC integration · AWS IAM least-privilege

OS / Scripting: Linux administration · Bash · Python (log parsing, automation)

PROFESSIONAL EXPERIENCE

DevOps Engineer - Intern | Cominent Private Limited, Bengaluru Jun 2026 - Present

- Built a monitoring and incident-response framework for a QA-stage Kubernetes cluster (AWS EKS/on-prem hybrid) covering resource categorization, alert thresholds, failure scenarios, ownership mapping and resolution runbooks.
- Diagnosed and resolved Grafana–Keycloak SSO authentication and session-logout failures on EKS environments, restoring secure monitoring access.
- Diagnosed and resolved SSO session logout issue on the QA cluster, improving security posture of monitoring access.
- Deployed Site24x7 as an external monitoring layer alongside the internal Prometheus stack; validated with live OOMKill and pod-deletion tests and presented findings to leadership.
- Defined monitoring strategy mapping cluster resources (compute, pods, databases, ingress) across Site24x7 (infra-level) and Grafana (service-level) observability layers.

DevOps Engineer - Intern | Spenmo Technologies Private Limited, Bengaluru Apr 2022 - Sep 2022

- Architected a GitHub Actions CI/CD pipeline for a Java web application (build → test → Docker image → deploy), enabling zero-touch releases adopted as the team's standard workflow.
- Containerised the application with Docker, removing environment drift across dev/staging/prod.
- Configured AWS IAM roles under least-privilege principles, hardening the cloud environment.

PROJECTS

Kubernetes Production Migration - Full-Stack Blog App (Kubernetes, Docker, AWS EC2, Nginx, MongoDB Atlas)

- Migrated a 3-tier app (React + Node.js + Nginx + MongoDB Atlas) from EC2-Docker to Kubernetes; configured 3 frontend + 2 backend replica pods with NodePort, Secrets/ConfigMaps, and HPA for CPU-based autoscaling.
- Resolved ImagePullBackOff, CrashLoopBackOff and Nginx upstream failures using kubectl logs/describe/exec.

AI-Powered E-Commerce Platform - Royal Digital Mart (Next.js, Node.js, Docker, GitHub Actions, AWS, Nginx)

- Solo DevOps engineer on a full-stack e-commerce platform; built Docker multi-stage builds, GitHub Actions CI/CD, AWS provisioning and Nginx reverse proxy with SSL termination, cutting delivery from ~4 months to 2 weeks.

EDUCATION

B.Tech, Computer Science & Engineering - Graduated 2025, First Division
