

ALI MURTAZA

DevOps Engineer | Cloud& Infrastructure ISRE

Bengaluru, India • +91-9569804220 • connect.alimurtaza@gmail.com • [LinkedIn](#) • [GitHub](#)

PROFESSIONAL SUMMARY

Results-driven DevOps Engineer with hands-on experience architecting CI/CD pipelines, containerized deployments, and cloud infrastructure on AWS & EKS. Proven ability to migrate production workloads to Kubernetes, automate operations with Bash & Terraform, and reduce deployment cycles from months to days. Targeting DevOps / SRE / Cloud Engineer roles where reliability engineering and automation drive real impact.

TECHNICAL SKILLS

Cloud / Iac	AWS (EC2, IAM, S3, VPC, ELB, Route 53, EKS, ALB) · Terraform (IaC provisioning)
CI/CD	GitHub Actions (multi-stage pipelines) · Jenkins · Docker multi-stage builds
Containers / Orchestration	Docker · Docker Compose · Kubernetes (Minikube, EKS, HPA) · Helm Charts
OS / Network	Linux · Bash · SSH · Nginx · SSL/TLS · DNS · Load Balancing · VPC · AWS ALB Ingress
Observability / Monitoring	Prometheus · Grafana · Helm monitoring stack · Log analysis · Pod debugging · kubectl
Others	RabbitMQ · Git · Amazon Q Developer · AI-assisted development

PROFESSIONAL EXPERIENCE

DevOps Engineer — Intern | Spenmo Technologies Pvt. Ltd., Bengaluru

Apr 2022 – Sep 2022

- Architected a full CI/CD pipeline using **GitHub Actions** for a Java-based web app — automating build → test → Docker image build → deployment, achieving zero-touch releases.
 - Containerized the Java application with Docker, eliminating environment drift across dev/staging/prod by standardising runtime environments.
 - Configured **AWS IAM** roles and policies following least-privilege principles, hardening the cloud environment and ensuring access-control compliance.
 - Collaborated cross-functionally with backend and QA teams to translate operational requirements into automated pipeline stages.
- Key Outcome: Delivered a production-grade Docker pipeline — adopted as the team's standard release workflow.

PROJECTS

3-Tier WebApp on AWS EKS — Kubernetes · EKS · Helm · AWS ALB · Docker · Nginx · Terraform · MongoDB Atlas

- Provisioned a production-grade **AWS EKS cluster** via Terraform; deployed React + Node.js + Nginx stack with full orchestration, service discovery, Secrets & ConfigMaps.
- Packaged all tiers as **Helm Charts** with environment-specific value overrides, enabling templated, repeatable rollouts across dev and prod.
- Deployed **AWS ALB Ingress Controller** — configured path-based routing rules and SSL/TLS termination via Application Load Balancer for external traffic management.
- Implemented **HPA** for CPU-based autoscaling; debugged ImagePullBackOff, CrashLoopBackOff and Nginx upstream failures using kubectl logs, describe & exec.

Kubernetes Monitoring Stack — Prometheus · Grafana · Helm · Minikube · Kubernetes · Observability

- Deployed a production-grade **Prometheus + Grafana** monitoring stack on a live Minikube cluster — installed and configured each component independently via **Helm Charts** rather than pre-packaged scripts, forcing deep understanding of cluster-level networking.
- Configured **Prometheus scrape targets** to collect real-time CPU, memory, and pod health metrics from container workloads; built interactive **Grafana dashboards** with Prometheus as the datasource.
- Debugged and resolved 3 critical infrastructure issues: ErrImagePull from corrupted Docker cache layers (fixed via docker system prune inside Minikube node), port clash between services (Grafana :3000 / Prometheus :9090), and Grafana datasource Connection Refused caused by incorrect localhost routing — resolved using **minikube ip + NodePort** for cross-container communication.

AI-Powered E-Commerce Platform — RoyalDigitalMart — Next.js · Node.js · Docker · GitHub Actions · AWS · Nginx

- Architected and deployed a full-stack e-commerce platform solo — leveraging Amazon Q Developer to generate 70% of the codebase while maintaining production-grade quality.
- Built complete CI/CD ecosystem: Docker multi-stage builds, GitHub Actions pipeline, AWS provisioning, and Nginx reverse proxy with SSL termination.
- Compressed development lifecycle from 4 months to 2 weeks via AI-augmented development; migrated PM2 to containerized deployment improving observability and security posture.

EDUCATION

B.Tech, Computer Science & Engineering | Rameshwaram Institute of Technology & Management
— Lucknow, India

Graduated 2024–25 · First Division
